

Case IH FieldOps – Steps to Success

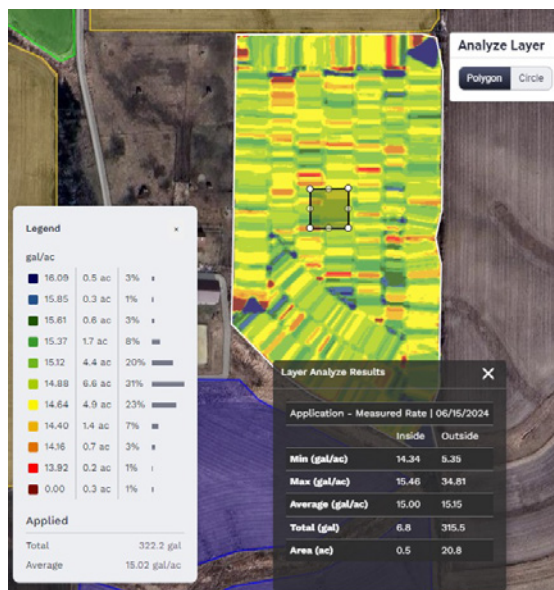

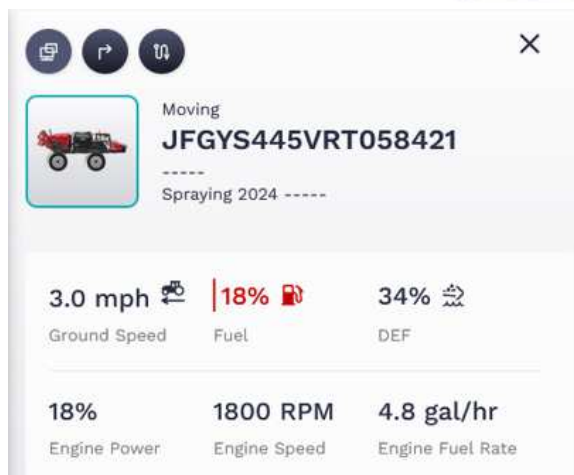

Case IH FieldOps™ will connect managers to their machines, fields, teams and dealer by providing the powerful data needed to make real-time decisions that drive impact for their operation. This resource is intended to highlight key features that Case IH sprayer operators or farm managers can leverage in FieldOps.

- Remotely view the Pro 1200 display from either the desktop or your mobile phone to view and assist functions on the display during sprayer operation.
- Near real-time machine monitoring allows users to track sprayers, understand machine performance, and suggest any changes necessary.

- Create spraying prescriptions in FieldOps for variable rate application across a field.
- With file transfer on Case IH sprayers equipped with the Pro 1200 display, the user has the ability to view all of their as-applied data in FieldOps removing the need for a USB drive. Once that data is ingested into FieldOps, users can analyze data layers by drawing a polygon around certain areas of the field to view more specific as-applied data about that selected area.

- Creating alerts/notifications/geofences for preventative/proactive maintenance to quickly spot high priority issues.
- Export boundaries from FieldOps into your Case IH sprayer for accurate estimated time to completion and as-applied data tracking.

- Ensure API partners are setup in FieldOps to access the most reliable and accurate as-applied data in one platform, such as the Slingshot API.

CNH Industrial America LLC reserves the right to make improvements in design and changes in specifications at any time without notice and without incurring any obligation to install them on units previously sold. Specifications, descriptions and illustrative material herein are as accurate as known at time of publication, but are subject to change without notice.
